

CORRECTION

In the article “Validation of a Novel Protocol for Calculating Estimated Energy Requirements and Average Daily Physical Activity Ratio for the US Population: 2005-2006,” published in the December 2013 issue of Mayo Clinic Proceedings (2013;88(12):1398-1407), the P values in the last sentence in the results section of the abstract were incorrect. The sentence should read: “Obese men and women had lower APAR values than normal weight individuals (P=.023 and P=.015, respectively).”
