Enriching diets in kidney stone formers with foods high in calcium and potassium may help prevent recurrent symptomatic kidney stones.
Tricuspid Regurgitation Impact on Outcomes (TRIO): A Simple Clinical Risk Score
Kyla M. Lara-Breitinger, Christopher G. Scott, Vuyisile T. Nkomo, Patricia A. Pellikka, Garvan C. Kane, Hari P. Chaliki, Brian P. Shapiro, Mackram F. Eleid, Mohamad Alkhouli, Kevin L. Greason, Sarin V. Pislaru, and Charanjit S. Rihal

The TRIO score (Tricuspid Regurgitation Impact on Outcomes) is a simple clinical tool for risk assessment in patients with notable tricuspid regurgitation.

Racial Differences and Social Determinants of Health in Achieving Hypertension Control

Black patients with poorly controlled hypertension have a higher prevalence of health barriers than their White counterparts.

Prediction of Mortality in Coronary Artery Disease: Role of Machine Learning and Maximal Exercise Capacity
Christina G. de Souza e Silva, Gabriel C. Buginga, EDMundo A. de Souza e Silva, Ross Arena, Codie R. Rouleau, Sandeep Aggarwal, Stephen B. Wilton, Leslie Austford, Trina Hauer, and Jonathan Myers

Using only maximal exercise capacity and age, it is possible to predict patients’ survival probabilities up to 21 years of follow-up after an initial diagnosis of coronary artery disease.

Effectiveness and Safety of Clopidogrel vs Aspirin in Elderly Patients With Ischemic Stroke
Hsin-Yi Huang, Shin-Yi Lin, Aaron J. Katz, Jau-Jiuan Sheu, Fang-Ju Lin, Chi-Chuan Wang, and Chung-Hsien Wu

In patients aged 80 years or older with primary acute ischemic stroke, clopidogrel users had lower risks of recurrent stroke and the composite cardiovascular events compared with aspirin users.

Physical Activity in Cardiac Implantable Electronic Device Recipients During the COVID-19 Pandemic
Abhishek J. Deshmukh, Camden Harrell, Jacob Hicks, Ammar M. Killu, Siva K. Mulpuru, Samuel J. Asirvatham, Paul A. Friedman, Yang Mei Cha, and Malini Madhavan

Following the declaration of the COVID-19 pandemic, a significant decline in daily physical activity was observed in individuals with a cardiac implantable electronic device.

Longitudinal Anthropometric Measures and Risk of New-Onset Atrial Fibrillation Among Community-Dwelling Men and Women
Zuolin Lu, Sven Geurts, Banafsheh Arshi, Martijn J. Tilly, Elif Aribas, Jeanine Roeters van Lennep, Natasja de Groot, Dimitris Rizopoulos, M. Arfan Ikram, and Maryam Kavousi

Height in men and weight in women showed the strongest associations with new-onset atrial fibrillation. Increase in central obesity showed a stronger association with incident atrial fibrillation among women than men.

Twenty Years of Targeted and Biologic Immunomodulatory Drugs: Postmarketing Modifications of Drug Labels Approved by the US Food and Drug Administration
Julia Berman, Yarden Yavne, Yonatan Edel, Ori Elkayam, Victoria Furer, and Daniel Shepshelovich

The substantial interval between the initial drug approval and the recognition of a safety event reflects potential for improvement in postmarketing surveillance.
