Symposium on Regenerative Medicine

Get a current and comprehensive survey on the promise of regenerative medicine...how it is—and will be—impacting patient care. Authored by experts worldwide, this 230 page soft-bound collection has 53 full-colored images and special artistically rendered page-breaks reprinted from Proceedings articles. The book addresses the innate regenerative capacity of an adult organ, the biotechnology underlying regenerative approaches, the practices of whole-organ reconstruction, and the clinical experiences in regenerative thoracic surgery, cardiovascular medicine, wound healing, hepatology, orthopedics, and neuroregeneration.

- Introduction to the Symposium on Regenerative Medicine
- Regenerative Medicine Primer
- Innate Regeneration in the Aging Heart: Healing From Within
- Materials Science and Tissue Engineering: Repairing the Heart
- Wound Healing: A Paradigm for Regeneration
- Whole Organ and Tissue Reconstruction in Thoracic Regenerative Surgery
- Emerging Medical Devices for Minimally Invasive Cell Therapy
- Regenerative Nanomedicine for Vision Restoration
- Optical Stimulation for Restoration of Motor Function After Spinal Cord Injury
- Regenerative Medicine in Diabetes
- Liver Renewal: Detecting Misrepair and Optimizing Regeneration
- Cellular Therapy for Liver Disease
- Tissue Engineering for Otorhinolaryngology-Head and Neck Surgery
- Regenerative Medicine and Nasal Surgery
- Vascularized Composite Allotransplant in the Realm of Regenerative Plastic Surgery
- Breakthroughs in Cell Therapy for Heart Disease: Focus on Cardiosphere-Derived Cells
- Advances in Regenerative Orthopedics
- Targets of Immune Regeneration in Rheumatoid Arthritis
- National Institutes of Health: A Catalyst in Advancing Regenerative Medicine Science Into Practice
